Krishi Bhawan, New Delhi
Dated: 23rd June, 2023

To

ACS/Pr. Secretary/Secretary/Commissioner (Agriculture)
State of Andhra Pradesh, Assam, Gujarat, Karnataka, Kerala Madhya Paradesh, Maharashtra, Odisha, Rajasthan, Tamil Nadu, Telanagana and Uttar Pradesh.

**Subject:** Advisory on Setting up of Helpdesk for Digital Crop Survey -reg.

Sir,

I am directed refer to the above subject and this Department's letter of even no. dated 21.05.2023 regarding implementation of Digital Crop Survey from Kharif 2023.

2. In this regard, an Advisory on setting up of Helpdesk for smooth implementation of Digital Crop Survey is enclosed herewith for information and further necessary action.

Yours faithfully,

Encl: As above.

Chandan Kumar 23/6/23

(Chandan Kumar)
Under Secretary (Digital)
Ph.: 011-23382926

# Advisory on Helpdesk for Digital Crop Survey

## 1. Overview

The Help Desk would aid in providing right information, solving the ground issues and queries which would arise during the Crop survey by the Farmers/Surveyor's/Government Officials. The Help Desk would ensure that all the queries are resolved within 5-15 minutes after first registered to their platform.

## 2. Roles & Responsibilities of Help Desk

The Help Desk team is responsible for providing support for the Crop Survey Application. They are specially trained to handle various support activities related to the application. Here are the key functions and responsibilities of the Help Desk team:

I. **CRM-based Software:** The Help Desk team utilizes customer relationship management (CRM) customizable software to manage incoming calls. They receive calls, allocate them to available executives, monitor missed calls, and make outgoing calls to attend the reported issues.

II. **Application Guidance:** The Help Desk provides step-by-step guidance to surveyors and end-users of the Crop Survey Application. They assist users in understanding the application functionalities and address any issues or clarifications they may have.

III. **Remote Support:** If a surveyor is unable to resolve an issue after receiving oral instructions over the phone, the Help Desk team uses remote support tools such as Team Viewer or AnyDesk to connect with the user's mobile device. They can then remotely access the device and assist in resolving the problem.

IV. **Virtual Trainings:** The Help Desk team conducts virtual training sessions using simulators to enhance the surveyors' understanding of the Digital Crop Survey. These sessions aim to improve their knowledge and proficiency in using the application effectively.

V. **Account Management:** The Help Desk team has the authority to enable or disable surveyors' accounts based on specific conditions or approval requirements. They manage user accounts to ensure proper access and control.

VI. **Device Compatibility:** The Help Desk team verifies the compatibility of mobile devices with the application and its versions. They guide surveyors on the necessary settings and configurations required on their mobile devices to ensure smooth operation of the Crop Survey Application.

VII. **Application Settings:** The Help Desk assists surveyors in downloading and installing the application from the Play Store. They also provide guidance on configuring settings such as mobile accuracy for GPS, memory settings, and image capturing process to ensure optimal performance.

VIII. **Data Download:** The Help Desk team helps surveyors download master data related to their jurisdictions and roles. This data is essential for conducting surveys and gathering accurate information.

IX. **Training on New Requirements:** The Help Desk team conducts training sessions to educate users, including officers, surveyors, and other stakeholders, on new change requirements. They ensure that users are up to date with the latest features and functionalities of the Crop Survey Application.

X. **Escalation to Technical Support:** If the Help Desk team is unable to resolve an issue, they forward the call to the Technical Support Team. The Technical Support Team has the expertise to cross-verify and resolve more complex technical issues.

XI. **Data Gathering:** The Help Desk team collects information from officials and surveyors regarding defective village maps. This information is then shared with the survey dept/ GIS team by the end of the day for further analysis and action.

## 3. Help Desk Structure

The Help Desk structure for the Crop Survey Application consists of several key roles to ensure efficient operation and support. Here are the roles within the Help Desk department:

I. **Tele-executive Operators:** These operators are responsible for directly interacting with issuers (users) and providing them with guidance and assistance over the phone. They handle incoming calls, address queries, troubleshoot issues, and strive to resolve them promptly. They play a vital role in providing initial support and gathering relevant information from issuers.

II. **Team Leaders/Managers:** Team Leaders or Managers oversee the Help Desk department and are responsible for managing and monitoring the Tele-executive Operators. They ensure smooth functioning of the Help Desk, monitor call quality, performance, and adherence to processes. They provide guidance, training, and support to the team members, ensuring efficient operations and customer satisfaction.

III. **Subject Matter Expert:** The Help Desk department includes a subject matter expert who possesses advanced knowledge and expertise in specific areas related to the Crop Survey Application. They provide expert advice, guidance, and solutions to both Tele-executive Operators and users, particularly in more complex or specialized issues. They play a critical role in resolving advanced queries and providing specialized support.

IV. **State Technical Support Team:** The Help Desk set up also includes a technical support team dedicated to resolving technical issues related to the application. This team possesses in-depth technical knowledge and expertise to address technical problems faced by users. They work closely with the Tele-executive Operators, providing guidance, troubleshooting assistance, and remote support to resolve technical issues.

## 4. Roles & Responsibilities of State Technical Support Team

The Technical Support Team plays a crucial role in resolving complex technical issues and providing support to users of the Crop Survey Application. Here are their key roles and responsibilities:

I. **Issue Verification:** The Technical Support Team verifies the issues that are escalated from the Help Desk team when they are unable to resolve them. They cross-verify the problem to ensure a comprehensive understanding of the issue.

II. **Remote Support:** The Technical Support Team takes remote access of the surveyor's mobile device to investigate and resolve the reported issue. They simulate the problem on their own devices, if necessary, to better understand and find a solution.

III. **Data Backup and Restoration:** If there is any loss of data due to mobile device errors, loss of the device itself, or inability to upload data to the server, the Technical Support Team assists surveyors in taking necessary data backups and restoring them. They remotely access the surveyor's device and provide guidance or perform necessary actions to recover the data.

IV. **Village TPK Map Verification:** The Technical Support Team cross verifies the survey numbers displayed in the mobile application with the actual field data to ensure there are no mismatches. They investigate and resolve any discrepancies identified.

V. **Web Application Support:** The Technical Support Team provides assistance to officers by remotely accessing their systems and resolving any web application-related issues they encounter. They address problems, provide guidance, and ensure the smooth functioning of the web application.

VI. **Issue Tracking:** The Technical Support Team maintains a day-wise list of issues that were not resolved from their end. This list is then forwarded to the respective department or development team for further investigation and resolution.

VII. **Liaison with Officers:** The Technical Support Team interacts with District, Taluka, and Field-level officers to address any change requests or suggestions they may have. They gather feedback and relay it to the department head for consideration.

VIII. **Coordination and Mediation:** The Technical Support Team acts as a mediator between the Help Desk team, the Development team, and department officers. They facilitate coordination and communication to ensure effective resolution of issues and address any change requirements.

5. **Central program management Unit (CPMU Team)**: This is the Central program management Unit which is setup by the central government to facilitate seamless implementation of Digital Crop Survey project. Each state has been allocated one CPMU resource which will work as a coordinator among technical support team, Development Team and Head of the department. CPMU Team will track and monitor the Issues/Bugs in the application, change request suggested by the District /Taluk / Field Officer. Also, the CPMU Team will forward issue/Bug report to the corresponding Development Team and discuss the change request with the Department Head for the implementation.

By having these key roles within the Help Desk department, the Crop Survey Application ensures that users receive prompt, accurate, and specialized support. The Help Desk structure enables effective coordination, efficient problem-solving and smooth operations, contributing to a positive user experience.

| S. No. | Resource Category | Key Responsibilities of resource | Mandatory Skillset for Resource Hiring | Total Number of Resources required based on the State wise & No. of Users |
|---|---|---|---|---|
| 1 | Tele-executive operators | They will resolve the Farmer/surveyor/officials issues received via phone and provide further assistance over call. They will also create repository of issues and share it respective teams by EOD. | They should be fluent in reading and speaking English and Regional State Language. | 8-15 distributed in 2 shifts. Exact number to depend upon number of crop surveyors. For 20000 crop surveyors 8 help desk resources would be good to start with. |
| 2 | Technical Support resources | They will resolve the Farmer/surveyor/officials issues that were not cleared over call by Tele-executive operators. They would then connect with issuer over Team viewer and resolve the issue related to app. They would also the issues registered via webpage or mail. | They should be fluent in reading and speaking English and Regional State Language.<br>They should have prior experience into app development (> 3 years) | 2-4 resources as per the number of crop surveyors |
| 3 | Subject matter expert | They will resolve the Farmer/surveyor/officials issues related to Crop which were not cleared by Tele-executive operators. They would also provide virtual simulator training to the state, district Trainers | They should be fluent in reading and speaking English and Regional State Language.<br>They should have sound knowledge on Crop, Crop 4category, Crop Type, Crop season along with the subject knowledge on Crop survey | 2 resources |
| 4 | Team Managers | They will monitor, manage, and guide the Help Desk team. They will also act as a medium for to co-ordinate between state and Central government with Helpdesk. | They should be fluent in reading and speaking English and Regional State Language.<br>They should have prior team lead experience in | 1 resource |

| S. No. | Resource Category | Key Responsibilities of resource | Mandatory Skillset for Resource Hiring | Total Number of Resources required based on the State wise & No. of Users |
|---|---|---|---|---|
| | | | Telesales organization | |
| Total | | | | 13-32 |

**6. Escalation Matrix:**

The Escalation Matrix is a structured mechanism used to ensure timely resolution of issues by assigning them to the appropriate authorities. Here is the Escalation Matrix for the Crop Survey Application:

I. **Teleoperator Assistance:** When a call is received from the issuer, the teleoperator provides technical assistance to resolve the query. The teleoperator should aim to resolve the issue within 5-15 minutes. If the issue remains unresolved after 15minutes, it will be escalated to the technical support team.

II. **Technical Support Team:** If the teleoperator is unable to resolve the issue, it is escalated to the technical support team. The technical support team will connect with the issuer over remote desktop tools (such as Team Viewer) within 3 hours to provide the necessary assistance and resolve the technical errors.

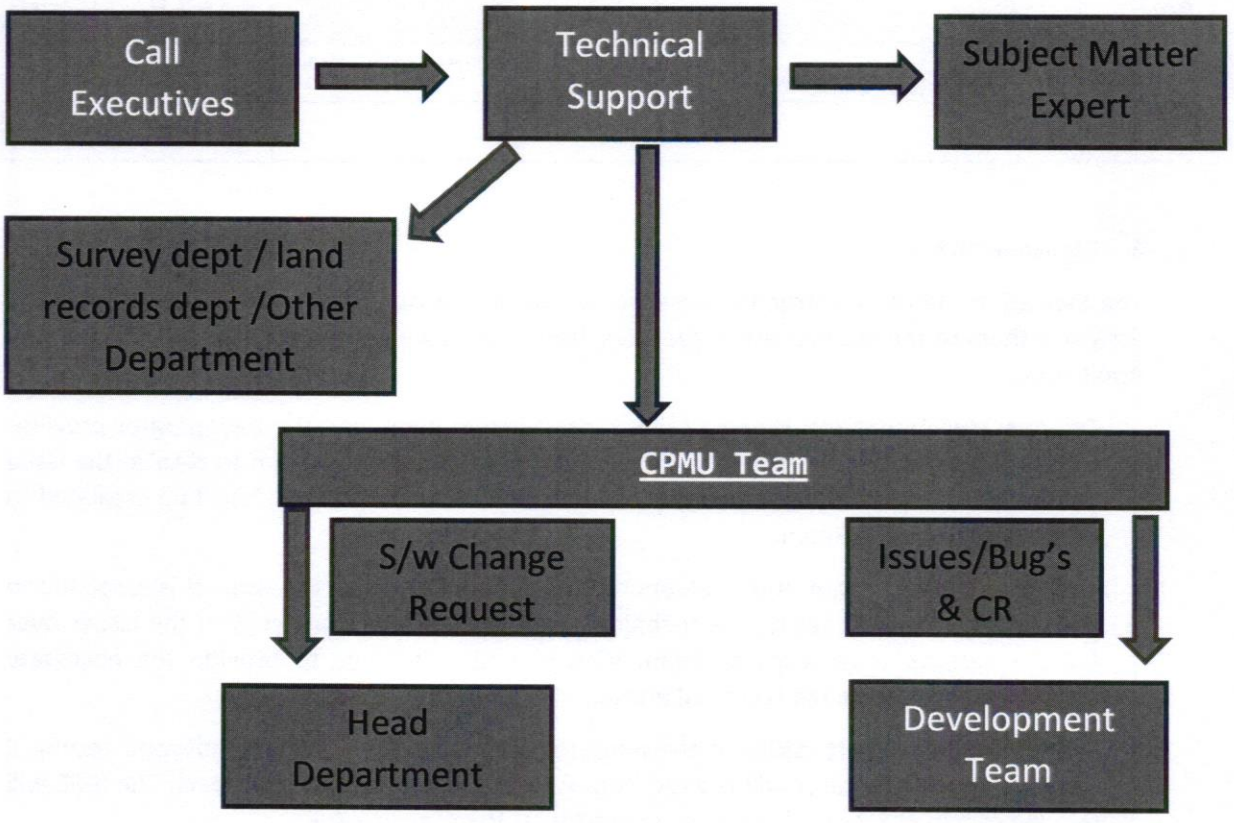

III. **Subject Matter Expert (SME):** If the issue requires specialized guidance beyond technical support, the teleoperator will redirect the issue to the subject matter expert. The SME will provide remedial action within 3 hours to address the specific issue.

IV. **Daily Issue List:** All unresolved issues, along with their current status, need to be listed and shared with the manager responsible for managing the Helpdesk. This provides a comprehensive view of pending issues for effective monitoring and follow-up.

V. **Communication with Department Head and Development Team:** The list of issues and change requests should be shared with the Department Head and the development team. This ensures that the relevant stakeholders are informed about on-going issues and change requirements for further action and resolution.

VI. **CPMU Team:** Work as a coordinator among technical support team, Development Team and Head of the department. CPMU Team will track and monitor the Issues/Bugs in the application,change request suggested by the District /Taluk / Field Officer. Also, the CPMU Team will forward issue/Bug report to the corresponding Development Team and discuss the change request with the Department Head for the implementation.

By implementing this Escalation Matrix, the Crop Survey Application can ensure that issues are addressed promptly and efficiently, with clear communication and accountability at each stage of escalation.

## Data field to be collected from CRM:

| Sr.No. | Escalation Matrix | Helpdesk Complaint No | Caller Type | State | District | Sub-District | Village | Caller Name | Caller Mobile No |
|---|---|---|---|---|---|---|---|---|---|
| 1 | Tele operator support | | | | | | | | |
| 2 | Technical Support | | | | | | | | |
| 3 | Subject Matter expert | | | | | | | | |

| Incoming/ Outgoing Call | Issue Type (Master Value) | Issue Description in Details | Priority Level | Issue Status | Action Taken | Comments | Assigned to Person | Time issue registered | Time issue closed |
|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |

## Process Workflow:

1. **Issue Registration:** When an issue is raised through the toll-free number, it is registered in the CRM system under the "Call received" category. Basic details of the issue are recorded.
2. **Assignment to Teleoperators:** The CRM system assigns the call to one of the five available Teleoperators based on their availability. The Tele-operators will be responsible for guiding the issuer and resolving the issue.
3. **Missed Call Allocation:** If there is a missed call, the CRM system registers the details and allocates it to a specific bucket of Tele-operators. These missed calls must be cleared before the end of the day.

4. **Issue Recording:** The Teleoperators record the details of the issue after providing assistance and resolving it. This includes capturing information such as the incoming call/ outgoing call Caller type, issuer's name, contact details, Issue type from the master, the issue Details, Priority level, Action Status, comments, and history of the caller if already issues recorded from earlier and resolved.

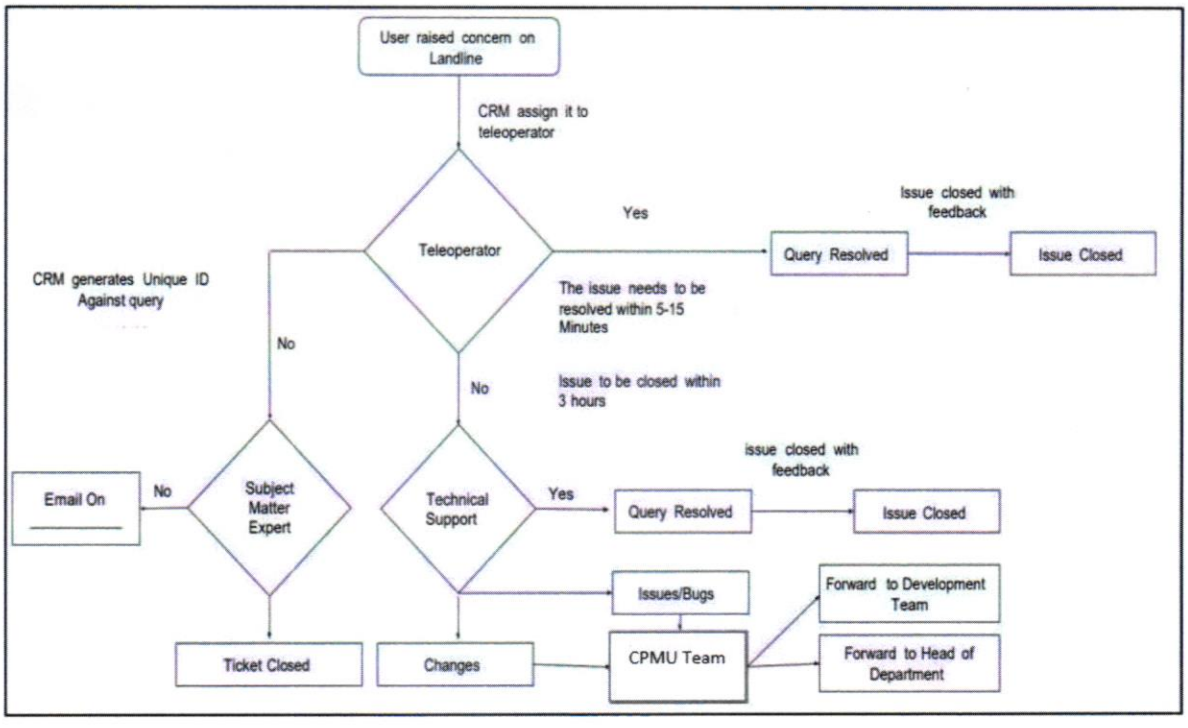

5. **Task Assignment to Technical Support:** If the Teleoperators are unable to resolve an issue, they assign the task to the technical support team through the CRM system. This categorizes the issue under the technical group for further investigation and resolution.

6. **Assignment to Subject Matter Expert:** In cases where the issue is related to crops, the Teleoperators have the option to directly assign it to a subject matter expert who specializes in crop-related matters. This ensures that specific expertise is provided for crop-related issues.

7. **Tracking Unresolved Issues and Change Requests:** The technical support team compiles a list of unresolved issues and change requests suggested by district, Taluk, or field-level officers. This list is then submitted to the Department Head or Development team and CPMU Team. The technical support team also tracks the status of these issues and change requests.

8. **CPMU Team:** Work as a coordinator among technical support team, Development Team and Head of the department. CPMU Team will track and monitor the Issues/Bugs in the application, change request suggested by the District /Taluk / Field Officer. Also, the CPMU Team will forward issue/Bug report to the corresponding Development Team and discuss the change request with the Department Head for the implementation.

9. **Guiding Help Desk and Department Officials:** Once the development team fixes the issues or implements the change requirements, the technical support team guides the Help Desk team and other department officials on the updated application in the live environment. They provide necessary information and support for a smooth transition and effective usage of the updated application.
